The Company

Oyster Kings has been family owned since the day it started operating in 1969. Our mission is simple, provide our customers with the best and most consistent oysters available on the market. This is why 100% of our oysters are spawned and fed naturally.

Our Oysters

Also called the Atlantic Oyster, *Crassostrea Virginica* is a species of oysters native to the eastern Atlantic coast. Naturally spawned in the wild, our oysters are grown near the nutrient-rich surface of a remote bay. Our oysters are grown 100% naturally without any use of feed or GMO's. Being cold-water species, Oyster Kings' oysters are great tasting and stay fresh for a very long time.

Year-Round Availability

Over the years, we have developed techniques that allow us to harvest oysters during all four seasons. Our oysters are transported directly from the water to our nearby processing facility where they are cleaned, sorted and packaged to fulfill our customers' orders.
